

Title of Article

A. B. Author1^{1*} and C. D. Author2²

¹ Address of A. B. Author1

² Address of C. D. Author2

Received: ??? ? , ???; Revised: ??? ? , ???

Abstract: This is the abstract of your paper and it should not exceed 200 words. A good descriptive abstract is very useful. The main results of the paper are explained here. It should be written in the third person.

Keywords: ?; ?;

Mathematics Subject Classification (2020): ?, ?,

1 Introduction

Please use this template to prepare your tex-file for NDST journal. Please read carefully all information including those preceded by % sign. These are important instructions and explanations. Addresses of all authors must be in English only.

Use PdfLatex commands in MiKTeX 2.9. The extensions of graphics files may be pdf, eps or png.

*Please, do not use “newtheorem”, “newcommand”, etc. (see the file **ndst.sty**. You are not allowed to change this file). Try to avoid defining your own macros.*

Using packages: latexsym, amssymb, amsmath, cite, dsfont, hyperref, graphicx, epsfig, epstopdf.

Do not use other packages, changing the style of NDST and the page format!

If you intend your paper for publication in the Journal please keep in mind that:

1. The subject of the paper should fall within the scope of the Journal (see <http://e-ndst.kiev.ua/aims&scope.htm>).
2. You should be acquainted with the papers on your subject published in the Journal so that to cite some of them in your references.

* Corresponding author: <mailto:E-mailofA.B.Author1>

3. Your paper should contain appropriate examples and/or application of general results as well as concluding remarks.

4. The references should be presented in the form meeting strictly the Instruction published in the Journal. Examples of reference citation [1–6] are given below.

5. For the paper codes MSC-2020 should be indicated (see <https://zbmath.org/classification/>) and key words should be provided.

It is highly desirable that the text of the paper not exceed 12 pages (except for the survey papers).

Generate a list of sources used in the preparation of the paper strictly in accordance with examples mentioned below and use references as [1–6].

Please, take into account that References should include some papers from ND&ST of the last two years (see Contents and Abstract via <http://e-ndst.kiev.ua>).

Thank you for your cooperation.

2 Title of Section 2

Formulas, Tables and Figures should be within the acceptable range of pages. Formulas are numbered on the right as in the following equation:

$$\sum_{i,j} \gamma_{ij} A_i X A_j^* = Y, \quad (1)$$

and correspondingly mentioned, e.g.: the solution X of (1). Use equation numbers only in the situation when they provide essential convenience.

2.1 Title of subsection 2.1

2.1.1 Title of subsubsection 2.1.1

Examples of Definition, Problem, Conjecture, Assumption, Lemma, Theorem, Corollary, Proposition, Remark, Algorithm, Example:

Definition 2.1 Content of Definition 2.1.

Problem 2.1 Content of Problem 2.1.

Hypothesis 2.1 Content of Hypothesis 2.1.

Assumption 2.1 Content of Assumption 2.1.

Lemma 2.1 *Content of Lemma 2.1.*

Theorem 2.1 *Content of Theorem 2.1.*

Proof.

□

Corollary 2.1 *Content of Corollary 2.1.*

Proposition 2.1 *Content of Proposition 2.1.*

Remark 2.1 Content of Remark 2.1.

Algorithm 2.1 Content of Algorithm 2.1.

Example 2.1 Content of Example 2.1.

Example of the graphics inclusion (Figure 1) with caption:

Example of the table (Table 1) with caption:

**Figure 1:** InforMath Publishing Group.

1	2	3	4	5
6	7	8	9	0
